

2018 X30 Carburettor Introductory Price and Engine Number Location

With the arrival of the 2018 X30 components we anticipate there will be many customers wishing to take advantage of the introductory pricing. Unlike the exhaust and radiator kits we require a valid engine number to be supplied when ordering the Tillotson HW-27A Carburettor to receive the intro price. This intro price is valid for one carburettor per engine number and there is no need to return your current carburettor to receive this price.

The engine number will only start with one of the following letters: **A, B, N, P, R, V** or **Y**. If the number you have starts with any other letter it is **not** the engine number and can't be used to receive the intro price for the new carburettor.

As there are multiple numbers stamped on the crankcase; and the location of the engine number has changed over the years, please refer to the photos below to help identify the correct number and ensure your orders can be processed without delay.

Position 1:

Earlier engines have the engine number located on the **front** of the inside front leg (closest to the seat). If your engine has a number stamped here that will be the engine number:

Position 2:

Later model engines have the engine number stamped on the same leg but around the corner behind the gear cover as in photo below:
